BUILDING COATING

Building coating solutions are insulation methods preferred to enable thermal insulation in buildings and reduce the tension occurring on the building surface due to thermal differences.

Our company Gölgeyap provides companies with solution offers such as siding and coating by the leading companies in the field such as Energytherm and Bonus.

THERMAL INSULATION

THERMAL INSULATION

Productive use of energy is a matter in question not only in our country but also in the whole world. We are also aware of the importance of thermal insulation when the point in question is construction.

If you are searching for a company to supply high-quality brands and perform applications together with their team of experts, you can always choose Gölgeyap with years of expertise.

WATERPROOFING

WATERPROOFING

Everyone agrees on the importance of water for modern living spaces. However, transportation of water to each floor of a building is an important subject requiring experience just as unintended leaking of water is a serious and unwanted situation.

This shows us the importance of waterproofing for modern structures. You can consult Gölgeyap for wholesale material supply and application regarding waterproofing and choose among the solution options we provide for you.

Reviewing the points to consider regarding waterproofing, you can see for yourself the importance and seriousness of the first recommendation made to you, which is the “material selection.” We, as Gölgeyap, are also aware of the importance of waterproofing and material selection in this regard.

For these reasons, Gölgeyap is a party-to-solution partnership with the leading companies in the field of waterproofing such as Baunit and Weber.

SMILE TO LIFE

A large pile of ribbed steel bars (rebar) in a warehouse or construction site. The bars are bundled together and show a distinct ribbed texture. An orange semi-transparent banner is overlaid on the left side of the image.

RIBBED BAR

RIBBED BAR

A ribbed bar is used for increasing the strength of the concrete.

It is composed of carbon and manganese elements and is safely used in construction projects thanks to its threaded structure.

The most important point to consider in terms of static and dynamic load in construction is the yield strength of construction steel. In addition, the elongation and tensile strength of the bar are considered in recent times.
